Anwar

Hi, currently I am learning web development with BootcampSpot. I've learnt some control version system comands and how to communicate with git hub through git bash and to creat repositories. I have also learnt to make changes to my code and show case those on the repository which may be accessible to other users. I have learnt some HTML and CSS so far. This is a demonstration of what I have learnt till now. It may not be the best but its my attempt to do my first deployment on my own.

My Work

# Hyper Text Markup Language

HTML stands for Hyper Text Markup Language. HTML is the standard markup language for creating Web pages. HTML describes the structure of a Web page. HTML consists of a series of elements. HTML elements tell the browser how to display the content.

# Cascading Style Sheet

CSS stands for Cascading Style Sheets. CSS describes how HTML elements are to be displayed on screen, paper, or in other media. It saves a lot of work. It can control the layout of multiple web pages all at once External stylesheets are stored in CSS files.
